

how to become an account defacer

The first way to become a Ripper is to open all your mental boundaries regarding the social world. Believe me, if you harm the mental health of others through social media, you will face social problems. Because you can't feel the emotions of the person you hurt, like their cries, their anger, or the words they tell you to feel. If you want to be a ripper, get stronger.

The second step is that you need to be aware of the different ways to block other people's accounts. backend server attacks, use email spam techniques, spam reporting, and direct account suspension using tools within one application.

If you want to attack via a **backend server**, you need to learn server basics. Let's start with what a front server is and how to get into it. For front server attacks, you will need to learn your own intrusion code if necessary. I'm not familiar with this method, so I won't explain it further.

If you want to attack with **spam email**, you must spam emails to WhatsApp, the email content is to request WhatsApp to create a BN according to the number you are targeting, try to use phishing phrases such as accusing your target of being a drug dealer in email.

>

If you only spam a dozen times, it may not be effective. Try creating as many Google accounts (at least 7 accounts) and with these accounts you can spam emails on WhatsApp.

To make it easier for you to spam emails, I will do gives you a github link for spam.

Note: this uses terminology and you need to understand it first.

If you want your target account banned through **spam reporting** method then you just need to report your target account or report every chat it gives you, 1 chat = 1 report, in a year it is estimated that your conversations with the victim can reach a maximum of 120-200 conversations, although this number is not too close, it allows you to receive many reports for the account there.

These are not all the methods I want to give, there are many explanations that I haven't finished explaining yet, I will end the entire discussion this time if I have free time
